EXPERIENCE

Strategic Designer, Client Engineering – IBM

New York, NY | Jan 2026 - Present

- Own end-to-end design of AI and automation experiences across 3 enterprise healthcare and university accounts, 4+ of which have shipped to production. Lead discovery workshops with stakeholders from frontline users to C-suite to scope use cases and define success metrics, taking concepts to validated prototypes in parallel 4-week cycles.
- Pioneered a design-to-code workflow connecting Figma MCP to IBM's AI IDE Assistant before GA, the first presented to clients in our market. Facilitated a use case workshop that turned 6 client priorities into user walkthroughs, then led their parallel build across a cross-functional team for a 30+ stakeholder Tech Day, advancing a \$500k deal.
- Led product discovery for a university athletics app aimed at increasing student engagement and adoption, working with department stakeholders to understand how students engage with existing content and scope a focused pilot. Benchmarked 9 competing apps across onboarding, personalization, and insights to shape user flows, then designed the experience in Figma within the university's brand guidelines.

Innovation Designer, Client Engineering – IBM

New York, NY | Aug 2024 - Jan 2026

- Led 0-to-1 interaction and visual design of an AI-powered medical quiz generator, from faculty discovery through iterative engineering reviews to production-ready specs and code, while mentoring a design intern. Designed within the client's design system to strengthen buy-in, supporting a grant for a school-wide rollout.
- Designed conversational flows and dynamic UIs for a multi-agent AI assistant helping residents navigate permits and licensing on a state government platform, along with the atomic design system and component library behind it, built to WCAG guidelines.
- Led discovery with 10 enrollment techs at a healthcare payer, mapping 3 end-to-end processes to surface pain points, applications, and time spent. Synthesized ideation through affinity mapping and prioritized opportunities by business value and feasibility, scoping an AI entity extraction pilot for form routing as a first step towards agentic automation.

Product Design Intern (iOS, Hardware Team) – Hudl

Lincoln, NE | May 2022 - Dec 2022

- Reimagined the manual fallback for ML camera calibration as a guided consumer-facing iOS flow, now live in the Hudl app. Diagnosed pin visibility, shape, and thumb-occlusion issues through Dovetail analysis and surveys, prototyped two calibration models, led A/B testing with 10 beta users, and validated on physical hardware.

EDUCATION

Purdue University – B.S. in User Experience Design

West Lafayette, IN | May 2024 | John Martinson Honors College

SKILLS

Product Design & Research: UX research, workshop facilitation, process and journey mapping, interaction and conversation design, prototyping, design systems, accessibility (WCAG), design-to-code workflows, AI experience and prompt design

Tools: v0, Cursor, Figma, Figma Make, Claude Code, Claude Design, HTML/CSS/JS, Webflow, Mural, Monday.com, Dovetail

PROJECTS

Skincare Analyzer Webapp

Designing and building a web app that analyzes ingredients in a user's skincare routine to check compatibility, grounded in user interviews and analysis of pain points across Reddit communities. Created the design system from scratch in Figma, including reusable components and a full brand guide, and now building the product database to take it live.
